

Magneto Bearings

The Magneto bearing is a separable grooved ball bearing. The inner ring raceway groove of magneto bearings is slightly shallower than that of deep groove bearings. The outer ring raceway has only one raceway shoulder and smooth transition to the open side.

Product Features

- Unique design: only one shoulder for the outer ring raceway (counter-bored outer ring)
- Cage and balls form a unit
- Separable outer ring

Benefits

- Easy-to-mount

Condition Description

- Fitting

Industries

- Material Handling
